

Langry LR-P40 Pull-off Tester

Professional detailed product specification sheet

This document presents a professional product overview including brand details, availability, specifications, and descriptive information for reference, sales support, and catalog-style distribution.

Product Overview

Langry LR-P40 Pull-off Tester

Manufacturer: Langry

Model: NDT-LAN-03497

Availability: In Stock

Description

LR-P40 is suitable for on-site testing projects related to tensile strength, such as concrete strength testing (C10~C80) for new and existing buildings, and bonding strength testing of exterior wall decorative tiles. The instrument configuration can be used for the post-installation pull-out method and post-anchoring method to detect concrete strength. The principle of testing concrete compressive strength is to calculate the concrete strength by measuring the pull-out force of the anchor placed in the concrete. This instrument features a digital pressure display and automatic peak value retention function. During the testing process, data can be stored using the machine, making the operatio...
